Wart away

For the treatment of warts on hands and feet
WARTS

A wart is generally a small, rough, harmless tumor, typically occurring on hands and feet but often other locations. It can resemble a cauliflower or a solid blister. Warts are caused by infection of the epidermis with human papilloma virus (HPV).

Warts are spread by contact, either directly from person to person, or indirectly via fomites left on surfaces. Infection via the environment is more likely to occur if the skin is macerated and in contact with roughened surfaces, conditions which are common in swimming pools and communal washing areas.

The ideal aims of the treatment of warts are:
- to remove the wart with no recurrence;
- to produce no scars.

THE SOLUTION

DermaForte® Wart away is a medical device for at home treatment of common warts on hands and feet. Wart away is a caustic solution intended to be topically applied to the surface of a wart, to necrose the wart. In a week time it will dissolve the top layer of the wart. It is based on Mono chloric acetic acid (50%) as the active ingredient. Only a small amount of Wart Away is dabbed onto the wart.

CLAIMS

- For the treatment of common warts on hands and feet;
- Dab only once;
- Painless and effective;
- For children and adults.

MECHANISM OF ACTION

The mode of action of DermaForte® Wart away is associated with keratolytic and cauterizing properties of monochloroacetic acid. It acts as keratolytic and cauterizing agent by physically destroying the keratin layer, warts and other lesions in which the epidermis produces excess skin. Also Mono chloric acetic acid has a coagulant action causing necrosis (premature death of cells and living tissue) of the wart. Its cauterizing effect is comparable to that obtained with such methods as electrocautery or freezing.

UNIQUE SELLING POINTS (USP’S)

- Easy, painless and safe to use at home;
- Suitable for children from the age of 4;
- Only 1 treatment per week;*
- Painless dabbing;
- Effective for thick warts on palms of hands and soles of feet as well as stubborn warts;
- Child resistant closure;
- Available in bottle and in pen;
- Class IIa medical device.

*depending on size

PRODUCT INFORMATION:

DermaForte® Wart away bottle:
- Outerbox
- Instructions for use
- Bottle with 4 ml fluid
- Child-safe cap

COMPOSITION:

DermaForte® Wart away bottle:
monochloroacetic acid, purified water.
